

"SKILLS 4 CLOUD"

BEYOND BROADBAND: A EU PERSPECTIVE FOR ONLINE SERVICES IN THE CLOUD

The Information Technology is undergoing a deep transformation. This change will lead to new opportunities within many productive sectors in terms of development and technology. The political world must be aware of that in order to manage the change and to take all the benefits that will come from it. This is the reason why we carefully analyze the formative requirements that Public Administration and industries will need in order to take all the economical, cultural and occupational benefits of this great transformation.
